

# Finally, You Have Options Other Than Drugs or Surgery

New research in a treatment called low level laser therapy, or Cold Laser, is having a profound effect on patients suffering with pain. Unlike the cutting type of laser seen in movies and used in medical procedures, Cold Laser penetrates the surface of the skin with no heating effect or damage.

Cold Laser therapy has been tested for 40 years, had over 2000 papers published on it, and been shown to aid in damaged tissue regeneration, decrease inflammation, relieve pain and boost the immune system. This means that there is a good chance Cold Laser therapy could be your pain solution, allowing you to live a more active lifestyle. Professional athletes like Tiger Woods and team members of the New England Patriots rely upon cold laser therapy to treat the sports-related injuries. These guys use the Cold Laser for one reason only....

## It Promotes Rapid Healing of the Injured Tissues

Before the FDA would clear Cold Laser for human use, they wanted to see proof that it worked. This led to two landmark studies. The first study showed that patients who had Cold Laser therapy had 53% better improvement than those who had a placebo. The second study showed patients who used the laser therapy had less pain and more range of motion days after treatment. If Cold Laser can help these patients, it can help you too.
