

# Why Back Pain & Sciatica Might Be

## *The Most Crippling Condition*

### Known to Man

...And How Many People May Have Found A Way To Beat It

#### Do You Have Any of the Following Symptoms?

- Sharp leg pains
- Lower Back Pain
- Herniated discs
- Leg numbness
- Shooting hip pain
- Muscle spasm
- Sciatica
- Lumbago

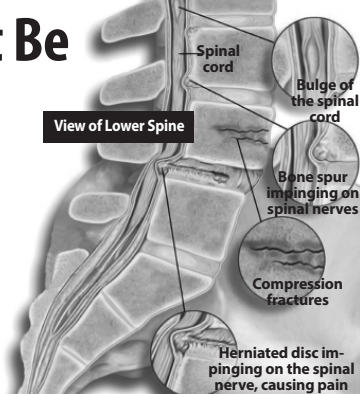

Let's face it...If your pain hasn't gone by now, it's not likely to disappear on its own. Having severe back pain caused by a herniated disc can feel like a crippling condition. When cushions in your back joints, called discs, get injured or wear out, they begin to degenerate and cause pain. Bulging and herniations begin to form, pressing on the nerve roots.

#### Before You Have to Go Under The Knife...

You should seriously consider a less invasive approach called spinal decompression combined with cold laser. They are technologies that have been proven to help disc herniations. Decompression creates a vacuum effect on the disc, which pulls the disc back into its normal position and brings in a fresh water & nutrient supply to promote healing. While non-surgical spinal decompression is a rather new treatment, there's plenty of research to back up its claims. In our office, we get anywhere from 70 to 100% improvement on patients with severe back pain, herniated discs and sciatica.

#### Finally, You Have Options Other Than Drugs or Surgery

New research in a treatment called low level laser therapy, or Cold Laser, is having a profound effect on patients suffering with pain. Cold Laser therapy has been tested for 40 years, had over 2000 papers published on it, and been shown to aid in damaged tissue regeneration, decrease inflammation, relieve

pain and boost the immune system. Professional athletes rely upon cold laser therapy to treat the sports-related injuries.
